CARDIFF UNIVERSITY BRAIN RESEARCH IMAGING CENTRE (CUBRIC)

Below is a floor plan of the building where the BEAM assessments will take place. This is a sensory map so you can see which rooms may be noisy, or have bright lights, so you can see the quiet places to relax

Shhh! Quiet Voices

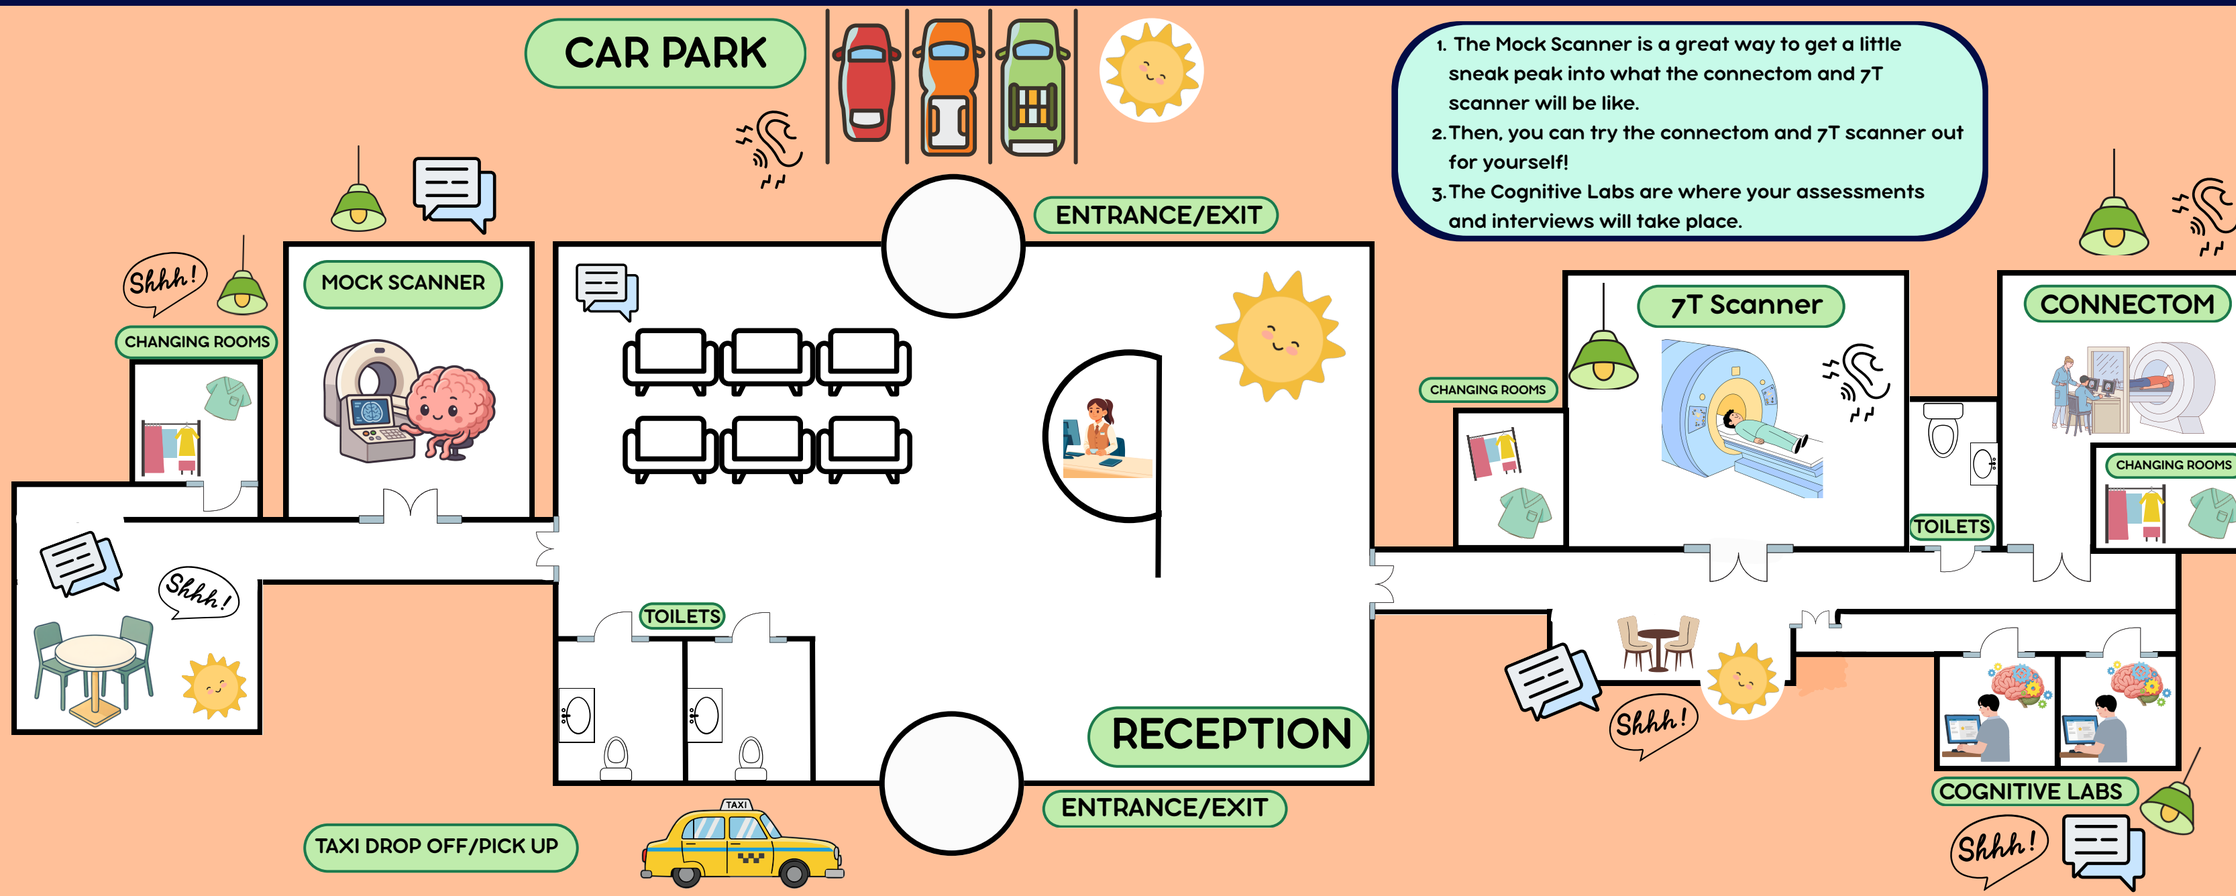

Chatter

Noisy

Natural Light

Bright Overhead Light

1. Upon arrival, you will enter the building depending on whether you travelled by car or dropped off by a taxi.
2. At the desk, a receptionist will be there to welcome you. You can then take a seat while a member of the research team comes to meet you.
3. For lunch and any breaks, there are areas that offer lower noise levels and plently of natural sunlight. For example, when they are not being used for assessments, the cognitive labs can be a great place to relax.
4. Alternatively, there are lots of great food spots nearby if you'd like to step out, but these tend to be busier and can be a bit louder.

1. The Mock Scanner is a great way to get a little sneak peak into what the connectom and 7T scanner will be like.
2. Then, you can try the connectom and 7T scanner out for yourself!
3. The Cognitive Labs are where your assessments and interviews will take place.
